Cable-Stayed Bridge Project

The aim of this project is to interconnect the cable-stayed bridge components. In doing so, the main problems that are associated with this type of structures will be understood. The contributors to this project are asked to fill out the following work sheet, which will be helpful in the determination of the total working time.

Note that, after the bridge is completed, the bridge will be inspected for its shape and cable tensions. Additionally, the time sheet will be collected for evaluation. Once, a new time sheet is provided to the project area, the bridge may be dismantled for a repeated construction.

Name (not required)	Working Time (min.)	Total Work Time (min)
